MEMORANDUM FOR THE FILE

E-X-T-R-A-C-T

"DCI Luncheon: The Director invited the Deputies to attend a luncheon today wherein he discussed some of the agreements and understandings reached at the conference at [] earlier in the year. The two items pertaining to the DD/S were as follows: (a) A suggestion that there be a study of the air support activities of the Agency with a view to considering consolidation or centralization where savings might be achieved and duplication eliminated. There was a very limited discussion on the proposal and I advised that I thought some consideration of this problem was worthy and some savings might result. The Director asked who should conduct such a study. I suggested that it should be some person neutral in the air support picture so as to present an objective Agency view as each element involved in air support approached their problem with some degree of emotion and perhaps parochialism. The Director asked John Clarke to advise him how he might go about conducting such a study. The Director said that he did not want a study to be configured on the principle of centralization since this question would come later from the substance of the study. (b) [] NPIC: Jack Smith had originally stated that NPIC, [] was somewhat crowded and that it was currently suffering from street vibrations which affected their sensitive equipment and that the impact of interface with EOI would presumably be such that it could not be accommodated in the present []. This was expanded somewhat by myself, Carl Duckett, and Jack Smith and the fact of the subway being built adjacent to [] was also mentioned. I advised that we had a team of experts studying this problem and we would have a report in the near future, and we would consider its implications then. There was some discussion of the requirements to house the main facilities of EOI and that the receiving base [] [] The Director raised the question as to why NPIC can't relocate

in some existing facility on some military base that is either being closed down or on which there are spare buildings that are not being used. The discussion touched upon the eastern U. S. but no definitive limitations were mentioned. The Director then asked the DD/S to start exploration of the military as to available bases and facilities which might serve to house NPIC and EOI."
